

Meets National Standards for: ✓ ASTM F1487-17 ✓ CPSC Guidelines #325

Product Description

The Single Station Leg Press makes it easy to build lower body strength by engaging key muscles like the quads and hamstrings. All the user has to do is sit back in the angled seat, place their feet on the footrests, and push. Regularly performing this exercise is guaranteed to make your legs stronger. The machine has no need for external weights as the smart design utilizes the user's weight to make the exercise challenging. The footrests have a textured surface which prevents the feet from accidentally slipping away while the user is applying pressure. The seat also accommodates users of different heights so everyone can enjoy a stable and effective workout. Users and investors can also rest easy about the seat's quality. The seat and back are made with high-quality and are tightly bolted to the metal bar. No matter how big the user is, the plastic seat won't flinch a bit. And to keep rust away and ensure an evergreen fresh look, the entire Single Station Leg Press is painted with powder coating.
