

Product Description

The Diamond Pattern Single Pedestal Bench has all the features to keep it looking great and standing strong for years to come. The net design of the seat and the back gives it uniqueness, while the rounded corners make sure no one is hurt. There's a wide gap between the seat and the back that lets air flow between the right places and keeps things cool and comfy. Holding up the entire structure are two thick and sturdy posts giving the bench its timeless durability. What's even better about these posts is they are available in different shapes to work with any surface. You have got a concrete surface? You can bolt it to the ground. Or, if you want a more permanent setup, it can also be installed right into the ground. The bench also has unique size options. The 6-foot-long option is more than enough for average traffic. But there's also the option of 8 feet to make sure everyone gets a seat.
